

Summer Internship 2026:

During her internship with the DRAM and Storage Products PMO (Program Management Office) at Micron Technology, Inc., from May 18 to August 7, 2026, Tam Mai delivered three AI and automation initiatives. She standardized the Product Development Team (PDT) meeting minutes agent by evaluating five existing versions and combining the strongest elements into one improved Copilot Studio solution, resulting in significant time savings and greater operational efficiency. She also built a Cross-PMO Insights Pipeline using Rovo for Confluence to provide portfolio-level visibility across programs, highlighting shared wins, lessons learned, risks, and opportunities across technologies. Additionally, she streamlined the DRAM Module Roadmap monthly reprioritization process with Power Automate and VBA, reducing manual effort.

Tam quickly built a strong understanding of the PLM (Product Lifecycle Management) process, Program Management workflows, and new AI solutions, demonstrating her ability to learn quickly and apply new concepts effectively. She shadowed PDT meetings, proactively sought information, networked independently, and asked pertinent questions to solve problems. While developing her agents, she took feedback seriously, proposed scalable improvements and added customization options that improved usability. When rapidly evolving AI tools required her to change direction, she pivoted successfully and kept her work impactful. Tam went the extra mile and requested an expansion to her internship scope based on stakeholder feedback. Through multiple development iterations, she showed patience, determination, and strong customer focus. She did a great job of balancing the technical details while keeping the broader objectives and priorities in mind. Her resourcefulness, tenacity and dedication are commendable.

Overall Evaluation – Exceeds Expectations

Overall, this internship was evaluated as a learning opportunity. Tam demonstrated alignment with Micron values in her respectful engagement with people, focus on innovation through scalable AI and automation solutions, tenacity in working through multiple iterations of her deliverables, proactively networking and collaborating with cross-functional teams and demonstrating customer focus by incorporating stakeholder and end-user feedback to ensure her work delivered value.
